

OPTIMIZATION OF COFFEE SHOP SALES DASHBOARD INSIGHTS

The Coffee Shop Sales Analysis Dashboard is designed to transform raw sales data into meaningful insights, enabling stakeholders to monitor key performance indicators (KPIs), identify growth opportunities, understand customer buying patterns, and make informed strategic decisions. This dashboard will provide a holistic view of the business's performance, facilitating improved efficiency and profitability. The primary benefits of this dashboard include real-time monitoring of sales performance, identification of top-selling products by region, by product category and product type, understanding peak sales periods, and the ability to track the impact of marketing campaigns. By providing these critical insights, the dashboard will empower stakeholders to make data-backed decisions that lead to increased revenue, improved customer satisfaction, and streamlined operations.

Dashboard 1 : Coffee Shop Sales Dashboard Overview

Visualization Analysis

1. Key Performance Indicators (KPI's) :

- **Total Revenue** - The total revenue generated from all units sold (in dollars).
- **Total Orders** - The total number of orders for all units sold (in dollars).
- **Total Quantities Sold** - The total number of quantities sold for all units from the coffee shop marketing activities.

2. Donut Chart :

❖ Revenue by Weekday/Weekend Key Insights :

- The larger portion of the donut chart (darker brown) represents weekday revenue, amounting to **\$505K**. This constitutes a significant **72.23%** of the total revenue.
- The smaller portion (lighter brown) represents weekend revenue, totaling **\$194K**. This accounts for **27.77%** of the total revenue.
- There is a substantial difference in revenue generated between weekdays and weekends. Weekday revenue is more than double the weekend revenue (\$505K vs. \$194K).
- This data suggests that the business experiences higher activity or sales volume during the weekdays compared to the weekends.

❖ **Summary :**

- The chart clearly indicates that the majority of the revenue is generated during the weekdays, with weekends contributing a significantly smaller portion. This information could be valuable for business decisions related to staffing, marketing efforts, and operational planning.

3. Clustered Bar Chart :

❖ **Revenue by Store Location Key Insights :**

- The Hell's Kitchen location has the highest reported revenue at **\$236.3K**.
- Astoria and Lower Manhattan have slightly lower but comparable revenues of **\$231.6K** and **\$230.6K**, respectively.
- Each of these locations contributes substantially to the overall revenue, with no single location drastically outperforming the others.

❖ **Summary :**

- While Hell's Kitchen is the current top revenue generator among these three locations, Astoria and Lower Manhattan are also strong performers with comparable revenue figures. This suggests that all three locations are important to the business's overall financial performance.

❖ **Revenue by Product Category Key Insights :**

- **Coffee** leads significantly in revenue, generating **\$268.3K**, which is substantially higher than any other product category.
- **Tea** is the second-highest revenue-generating category with **\$191.7K**, indicating its importance to overall sales.
- The **Bakery** category brings in **\$84.3K**, suggesting a decent contribution to the total revenue, but significantly less than coffee and tea.
- **Drinking Chocolate** generates **\$74.4K**, performing similarly to the Bakery category.
- **Coffee Beans** generate **\$40.0K**, showing a lower revenue compared to the prepared beverage categories.
- Categories like **Branded (\$13.6K)**, **Loose Tea (\$11.3K)**, **Flavours (\$10.4K)**, and **Packaged Chocolate (\$4.4K)** generate considerably less revenue compared to the top categories.
- There's a clear hierarchy in revenue generation, with Coffee and Tea being the dominant categories, followed by Bakery and Drinking Chocolate, then Coffee Beans, and finally a group of products with much lower revenue.

❖ **Summary :**

- The business heavily relies on Coffee and Tea for its revenue. While other categories contribute, their impact is significantly smaller. Understanding this revenue distribution is crucial for inventory management, marketing strategies, and overall business focus.

Revenue by Product Type

Barista Espresso | \$91.3K

PM Data Unavailable

Brewed Chai tea | \$75.7K

PM Data Unavailable

Hot chocolate | \$74.4K

PM Data Unavailable

Gourmet brewed coffee | \$69.1K

PM Data Unavailable

Brewed Black tea | \$46.6K

Brewed herbal tea | \$46.2K

Premium brewed coffee | \$38.9K

Organic brewed coffee | \$37.6K

Scone | \$35.4K

Drip coffee | \$31.3K

❖ **Revenue by Product Type Key Insights :**

- **Barista Espresso** leads significantly in revenue, generating **\$91.3K**, making it the highest-performing product type.
- **Brewed Chai Tea (\$75.7K)** and **Hot Chocolate (\$74.4K)** follow as the next highest revenue generators, indicating their popularity.
- **Gourmet Brewed Coffee** generates a significant **\$69.1K** in revenue.
- **Brewed Black Tea and Brewed Herbal Tea** have similar **moderate revenue**. These two types of brewed tea generate comparable revenue at **\$46.6K** and **\$46.2K** respectively.
- **Premium Brewed Coffee and Organic Brewed Coffee** show slightly lower revenue. These categories generate **\$38.9K** and **\$37.6K** respectively, indicating a lower sales volume compared to the top performers.
- **Scone (\$35.4K)** and **Drip Coffee (\$31.3K)** generate the least revenue compared to the other product types shown.
- A significant portion of the revenue comes from Barista Espresso, Brewed Chai Tea, Hot Chocolate, and Gourmet Brewed Coffee.

❖ **Summary :**

- The business's revenue is heavily driven by its Barista Espresso, followed by Brewed Chai Tea and Hot Chocolate. While other product types contribute, their individual revenue generation is notably lower. This information can be valuable for focusing on popular items, optimizing inventory, and tailoring marketing efforts.

4. Clustered Column Chart :

❖ Revenue Trend over the Period Key Insights :

- The card shows Daily Revenue generated for every single day present in a specific month.
- The average sales over the entire period are indicated by the dotted horizontal line.
- Within the stabilized period, there are noticeable daily fluctuations in revenue, with some days showing higher peaks and others lower valleys.

❖ Summary :

- The revenue trend shows an initial growth phase, followed by a period of relatively stable and higher-than-average revenue with daily variations, and then a significant drop towards the end of the period with a hint of recovery.

5. Tooltips :

❖ About Calendar Tooltip :

- This tooltip provides a concise snapshot of key performance indicators (KPIs). It is designed to offer immediate context and comparison when a user interacts with a specific data point on the main matrix chart. Here's a breakdown of what it reveals:
- **Multi-Row Card (Left Side):**
 - **Total Revenue:** This is the total monetary value of all sales for the specified date.
 - **Total Orders:** This represents the total number of individual transactions or orders placed on a specific date.
 - **Total Quantities Sold:** This indicates the total number of individual items or units sold across all orders on this date.
- **Donut Chart (Right Side):**
 - The donut chart visually represents the proportion of **Revenue (Rev)**, **Orders**, and **Quantities (Qtys)** relative to each other.
 - The different colored segments (blue for Revenue, dark blue for Orders, and orange for Quantities) allow for a quick visual comparison of the magnitude of each KPI.
- **Day over Day Revenue Growth/Decline (KPI):**
 - **+27.8% | +26.1K vs LM:** This section highlights the growth in revenue compared to the previous session (LM - Last Month).
 - **+27.8%** indicates a significant 27.8% increase in revenue compared to the total revenue of the previous session.
 - **+26.1K** provides the absolute increase in revenue, showing a growth of \$26,100 compared to the previous session's revenue.

❖ How to use :

- Hover above the Calendar chart present on the dashboard and see how the values change dynamically.
- This tooltip is valuable for quickly understanding the performance on a specific day and how the revenue compares to the preceding date. It allows us to identify high or low-performing periods and understand the underlying drivers (like the number of orders and quantities sold) contributing to the revenue.

❖ **About Day & Hour Tooltip :**

- This tooltip provides a detailed snapshot of key performance indicators (KPIs) for a specific **DAY** as well as a specific **HOURL** on a given date. It offers a multi-faceted view of performance, including absolute values, their relative proportions, and a month-over-month comparison for revenue. Here's a breakdown of the information presented:
 - **Top Section:**
 - **DAY :** Indicates that the data in this tooltip pertains to a Specific Day (e.g. Fri, Sun, Mon).
 - **HOURL:** Specifies that the data represents the performance during the Nth hour of the day(e.g. 6, 14, 20).
 - **Multi-Row Card (Left Side):**
 - **Total Revenue:** This is the total monetary value of all sales for the specified date.
 - **Total Orders:** This represents the total number of individual transactions or orders placed on a specific date.
 - **Total Quantities Sold:** This indicates the total number of individual items or units sold across all orders on this date.
 - **Donut Chart (Right Side):**
 - The donut chart visually represents the proportion of **Revenue (Rev)**, **Orders**, and **Quantities (Qtys)** relative to each other for specific DAY at a specific HOURL.

- The different colored segments (blue for Revenue, dark blue for Orders, and orange for Quantities) allow for a quick visual comparison of the magnitude of each KPI.

➤ **Day over Day Revenue Growth/Decline (KPI):**

- **+27.8% | +26.1K vs LM:** This section highlights the growth in revenue compared to the previous session (LM - Last Month).
- **+27.8%** indicates a significant 27.8% increase in revenue compared to the total revenue of the previous session.
- **+26.1K** provides the absolute increase in revenue, showing a growth of \$26,100 compared to the previous session's revenue.

❖ **How to use :**

- Hover above the Day vs Hour chart present on the dashboard and see how the values change dynamically.
- In essence, this tooltip provides a highly granular view of performance, allowing us to understand not just the overall daily or monthly trends, but also how specific days of the week and times of day contribute to the overall business performance and how they are trending compared to the recent past.
